Importance: High

Hi Karl,

Thank you for developing the draft response.

Attached below are my suggested revisions.

Please review and let me know if you're ok with or if additional edits are needed.

Hello Personal Matters / Ex. 6

Thank you for contacting the Centers for Disease Control (CDC) and Prevention regarding the Ames Warehouse fire in Parkersburg, West Virginia.

CDC and the Agency for Toxic Substances and Disease Registry (ATSDR) Region 3 and 5 Offices has been coordinating our public health and emergency response efforts with U.S. Environmental Protection Agency (EPA), West Virginia and Ohio state environmental agencies and local health departments. ATSDR is reviewing available environmental data from State and Federal partners as it becomes available. We appreciate your concern and are open to supporting the State with further exposure evaluations of the general public and emergency responders.

ATSDR has not received safety data sheets (SDSS), comprehensive chemical information, or sampling results about what was in the warehouse. Therefore, there is uncertainty about what chemicals were in the smoke/plume that was potentially (or might still be) in the air. There have been reports of strong plastics and typical combustion odors in residential areas. However, CDC/ATSDR does not have chemical information on what would be causing these odors or the public health implications.

For additional information and updates, visit the Mid-Ohio Valley Health Department (MOVHD) website at www.movhd.com or Facebook page at <https://m.facebook.com/MidOhioValleyHealthDepartment>.

For information about ATSDR and Environmental Odors, visit:
www.atsdr.cdc.gov
www.atsdr.cdc.gov/odors

Thanks Loretta.
I am in transit to Shaffer right now.

Karl, can you take lead on a draft response and coordinate it with Charles, pulling from ERS draft email?
(Charles can you share status of that email by the way?)

> I am a resident of the community in West Virginia experiencing the toxic fumes of the AMES fire. The County Commissioner stated at one of the meetings that the town had run out of money to put the fire out. I am concerned about the possible chemicals that are possibly burning and/or being released. I got a list from the Washington County Sheriff's Department of potential chemicals: (PVC,PTFE, Maleic Anhydride, Styrene, Fiberglass, Nylon, Carbon Black, Titanium Dioxide and TLB) that are potentially burning and/or being possibly being released. Many locals are experiencing headaches and nausea. The city is saying the fire may be around for another week. I am concerned about the health effects of breathing in all these toxic chemicals for such a prolonged period.. I want CDC to be aware of the situation we are experiencing and the potential danger to our health.
